## What are the risks of investing?

Risk indicator for the AMP Global Fixed Interest Fund:

The risk indicator is rated from 1 (low) to 7 (high). The rating reflects how much the value of the fund's assets goes up and down. A higher risk generally means higher potential returns over time, but more ups and downs along the way.

To help you clarify your own attitude to risk, you can seek financial advice or work out your risk profile at **sorted.org.nz/tools/investor-profiler**.

Note that even the lowest category does not mean a risk-free investment, and there are other risks that are not captured by this rating.

This risk indicator is not a guarantee of a fund's future performance. The risk indicator is based on the returns data for the past 5 years. While risk indicators are usually relatively stable, they do shift from time to time. The risk indicator will continue to be updated in future fund updates.

### Specific risk

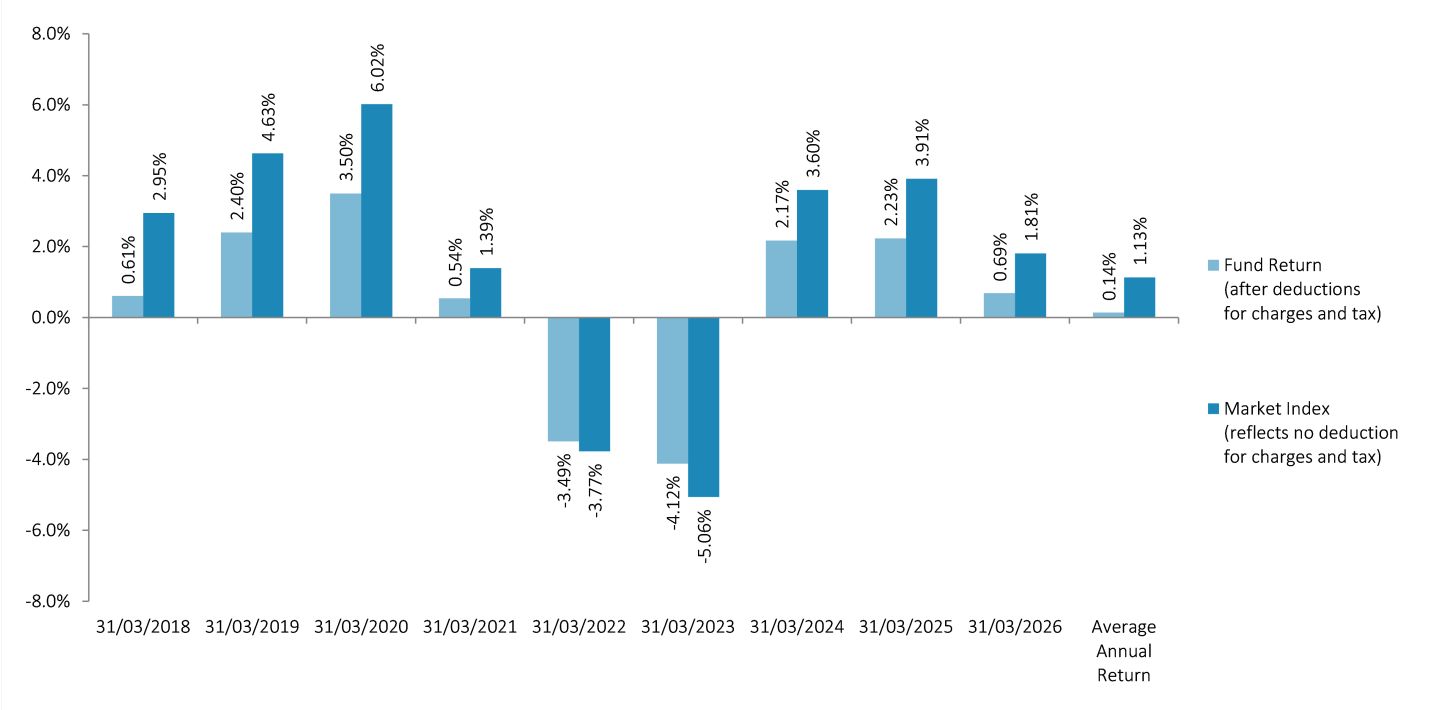

In addition to the general investment risks, you should be aware this fund is concentrated in a particular asset class and not diversified across multiple asset classes. At any given point, market conditions that cause one asset class to perform well may cause another asset class to perform poorly. This could result in negative or lower than expected returns compared to a fund which is diversified across multiple asset classes.

## How has the fund performed?

See the 'Other Material Information' document on the entry relating to the offer of interests in the AMP KiwiSaver Scheme maintained on the offer register (**disclose-register.companiesoffice.govt.nz**) for more information about those fees.

Small differences in fees and charges can have a big impact on your investment over the long term.
